

PINGI

Dear Customer,
Thank you for purchasing a PINGI quality product.
Please carefully read these instructions before getting started. This will ensure optimal performance and safe use of your product.

WARNING

- It is unsafe to drive a vehicle with dirty or misted windows that impede the drivers' view.

SAFETY - GENERAL

- a. Remove the plastic bag before first use.
- b. Do not try to open or cut the cloth.
- c. Do not leave the product in reach of children or pets.
- d. The car-dehumidifier must be secured before driving the vehicle. An unsecured car-dehumidifier may slide around inside a moving vehicle, distracting the driver or obstructing the operation of the foot pedals..

SAFETY - DRYING

- a. Burn/scalding warning – During the oven drying process this product will become very hot and extremely hot water vapour will be released. Handle with extreme caution.
- b. Do not exceed the recommended oven temperature.

APPLICATION

The PINGI reusable car-dehumidifier effectively removes moisture from the interior of your vehicle. It is your solution to early-morning fogged windows, musty odours and other moisture-related problems.

FUNCTION

The PINGI car-dehumidifier will attract excess moisture and retain it. As the car dehumidifier fills with moisture, it

MEGA CAR-DEHUMIDIFIER ASB-1000 OPERATING INSTRUCTIONS

will gradually become heavier until it is time to recharge. The pouch will weigh >1350g when it is full.

Attention!

Read the SAFETY – DRYING section before recharging your PINGI car dehumidifier the first time.

DRYING IN THE OVEN

- a. Place the pouch in a clean oven dish (pyrex/borosilicate glass) and position in the center of the oven.
- b. Set the oven temperature to 180 °C.
- c. Heat your car-dehumidifier for 3 hours.

CAUTION – During the oven drying process your PINGI reusable car-dehumidifier will get extremely hot. The water in your car-dehumidifier will heat up and evaporate.

It is also possible to dry your car-dehumidifier on a radiator or to place it in the sun for solar drying. This is, however, less effective and takes several days.

NOTES

- At the end of its service life the product can be disposed in the trash (household waste). Please always comply with local regulation regarding recycling and the collection of waste and inquire with your local government if needed.
- It may take several recharging cycles for the car-dehumidifier to remove all the accumulated dampness from your interior.
